

■ SACHI STREAM

Live Podcast Setup Guide for Hosts

Stream directly to your Sachi audience using OBS Studio

What You'll Need

■	OBS Studio installed (free — obsproject.com)
■	Your Sachi Podcast Host Dashboard open (sachistream.com/podcast-host)
■	Your RTMP Stream Key from the dashboard (unique to your show)
■	A webcam or microphone (built-in works fine to start)

1

Download & Install OBS Studio

- Go to obsproject.com in your browser
- Click Download and choose your OS (Windows / Mac / Linux)
- Run the installer — all default settings are fine
- Open OBS Studio once installation completes

■ *OBS is completely free and open-source. No account needed.*

2

Run the Auto-Configuration Wizard

- When OBS opens for the first time, click 'Auto-Configuration Wizard'
- Select: Optimize for streaming, click Next
- Set Video Base Resolution to 1920×1080 (or leave as detected)
- Click Next → Apply Settings

■ *If the wizard doesn't appear, go to Tools → Auto-Configuration Wizard.*

3

Get Your Stream Key from Sachi

- Open sachistream.com/podcast-host in your browser
- Log in with your Google account
- Find your podcast show and click 'Get Stream Key'
- Copy the Stream Key shown — keep it private, like a password

■ *Your stream key is permanent. You only need to do this once unless you reset it.*

4

Configure OBS Stream Settings

- In OBS, click Settings (gear icon, bottom right)
- Click Stream in the left sidebar
- Set Service to: Custom...
- In the Server field, paste this URL exactly:

```
rtmps://live.cloudflare.com:443/live/
```

- In the Stream Key field, paste your key copied from Step 3
- Click Apply, then OK

■ *Make sure there are no extra spaces before or after the server URL.*

5

Set Up Your Audio & Video Sources

- In the main OBS window, look at the Sources panel (bottom left)
- Click the + button to add sources:
- → Video Capture Device = your webcam
- → Audio Input Capture = your microphone
- → Display Capture = your screen (optional)
- Drag sources to resize them in the preview window

■ *Check audio levels in the Mixer panel — the green bar should move when you speak.*

6

Go Live on Sachi ■

- In OBS, click Start Streaming (blue button, bottom right)
- Wait 5–10 seconds for Cloudflare to pick up the signal
- Switch to your Sachi podcast-host dashboard
- Toggle the Go Live switch ON for your show
- Your listeners will now see your stream live in Sachi!

■ Always start OBS streaming *BEFORE* toggling Go Live on Sachi.

7

Ending Your Stream

- When you're done, toggle Go Live OFF on your Sachi dashboard first
- Then click Stop Streaming in OBS
- Cloudflare automatically saves your stream as a recorded episode
- The recording will appear in your podcast episode list within minutes

■ Always stop in this order: Sachi OFF first, then OBS. This ensures a clean recording.

Quick Troubleshooting

Problem	Solution
Stream won't connect	Double-check the RTMP URL: rtmps://live.cloudflare.com:443/live/
No audio for listeners	Check OBS Mixer — mic bar should go green when you speak
Sachi player shows nothing	Wait 10–15 sec after starting OBS before toggling Go Live
Stream is choppy/buffering	Lower bitrate: OBS Settings → Output → Video Bitrate → 2500 Kbps
Lost your stream key	Go to sachistream.com/podcast-host and click Get Stream Key again
