

Live Podcast Setup Guide for Hosts

Stream directly to your Sachi audience using OBS Studio

What You'll Need

- OBS Studio installed (free — obsproject.com)
- Your Sachi Podcast Host Dashboard open (sachistream.com/podcast-host)
- Your RTMP Stream Key (from the dashboard — unique to your show)
- A webcam or microphone (built-in works fine to start)

- Go to obsproject.com in your browser
- Click Download and choose your OS (Windows / Mac / Linux)
- Run the installer — all default settings are fine
- Open OBS Studio when installation completes

■ Tip: OBS is completely free and open-source. No account needed.

- When OBS opens for the first time, it'll offer an 'Auto-Configuration Wizard'
- Select: Optimize for streaming, click Next
- Set Video Base Resolution to 1920×1080 (or leave as detected)
- Click Next → Apply Settings

■ Tip: If the wizard doesn't appear, go to Tools → Auto-Configuration Wizard.

- Open sachistream.com/podcast-host in your browser
- Log in with your Google account
- Find your podcast show and click 'Get Stream Key'
- Copy the Stream Key shown — keep it private, like a password

■ Tip: Your stream key is permanent. You only need to do this once unless you reset it.

- In OBS, click Settings (bottom right gear icon)
- Click Stream in the left sidebar
- Set Service to: Custom...
- In the Server field, paste exactly:

```
rtmps://live.cloudflare.com:443/live/
```

- In the Stream Key field, paste your key from Step 3
- Click Apply, then OK

■ Tip: Make sure there are no extra spaces before or after the server URL.

- In the main OBS window, look at the Sources panel (bottom left)
- Click the + button to add sources:
 - → Video Capture Device = your webcam
 - → Audio Input Capture = your microphone
 - → Display Capture = your screen (optional)
- Drag sources to resize them in the preview window

■ Tip: Check your audio levels in the Mixer panel — the green bar should move when you speak.

- In OBS, click Start Streaming (bottom right blue button)
- Wait 5–10 seconds for Cloudflare to pick up the signal
- Switch to your Sachi podcast-host dashboard
- Toggle the Go Live switch ON for your show
- Your listeners will now see your stream live in Sachi! ■

■ Always start OBS streaming BEFORE toggling Go Live on Sachi.

- When you're done, toggle Go Live OFF on your Sachi dashboard
- Then click Stop Streaming in OBS
- Cloudflare automatically saves your stream as a recorded episode
- The recording will appear in your podcast episode list within minutes

■ Tip: Always stop in this order: Sachi first, then OBS. This ensures a clean recording.

Quick Troubleshooting

Problem	Solution
Stream won't connect	Double-check the RTMP URL — must be exactly: <code>rtmps://live.cloudflare.com:443/live/</code>
No audio for listeners	Check OBS Mixer — mic should show green bars when you speak
Sachi player shows nothing	Wait 10–15 sec after starting OBS before toggling Go Live
Stream is choppy	Lower Video Bitrate in OBS Settings → Output to 2500 Kbps
Lost your stream key	Go to sachistream.com/podcast-host and click Get Stream Key again
